Mapping Network Drives for Mac

Being able to access your network drives from your personal computer on campus (or a computer off campus connected via VPN) gives you easy access to all of your files stored on your H: drive or any departmental drives (S:). By saving files to your network drive, you can open them from almost anywhere. These instructions will show you how to connect to these drives. Note that if you are doing this on campus, you will need to be connected via eduroam or an Ethernet connection, and this will require connecting via VPN when not on campus.

1. From the Finder (or main desktop), click the Go menu and choose Connect to Server.
2. In the Server Address field, type the address for the area to which you would like to connect:

<table>
<thead>
<tr>
<th>For H: (Home Drive):</th>
<th>smb://home.brynmawr.edu/home/username</th>
</tr>
</thead>
<tbody>
<tr>
<td>For S: (Departmental Drives):</td>
<td>smb://storage.brynmawr.edu/storage</td>
</tr>
</tbody>
</table>

3. If you wish, click the + sign to the right of the address to add this address to your favorites.
4. Click Connect. A Connecting to Server window will pop open.
5. You will be prompted to enter a username and password. Be sure Registered User is selected, and put in your College username and password.
6. A window will open displaying the contents of your drive. You will remain connected to this drive until you lose network connection, restart, or disconnect.
