

# Configuring Google Chrome Settings

Chrome shares a lot of data with Google, we'd like to minimize that. These are the changes we suggest you make if you downloaded and installed Chrome from the Internet and not Software Center. The version in Software Center already has all security settings applied.

## Configuring Chrome Security Settings

1. Open Google Chrome.
2. At the top right, click **More** .
3. Select **Settings**.
4. Scroll down and click on **Show advanced settings...**
5. Under **Privacy**, uncheck everything except **Protect you and your device from dangerous sites** and **Send a "Do Not Track" request with your browsing traffic**.
6. Under **Privacy**, select **Content settings...**
7. In the Content settings box scroll down to Pop-ups and select **Manage exceptions...**
8. Under **Hostname pattern** enter **brynmawr.edu, vbm.brynmawr.edu, moodle.brynmawr.edu, td.brynmawr.edu, tegri-ty.brynmawr.edu** and **office365.com**. Verify that all websites are set to **Allow**. When finished press **Done**.
9. Under **Location** check **Do not allow any site to track your physical location**.
10. Under **Protected content** check **Allow identifiers for protected content**.
11. Under **PDF Documents** uncheck **Open PDF files in the default PDF viewer application**.
12. Press **Done**.

## Importing Bookmarks from Firefox

1. Open Google Chrome.
2. At the top right, click **More** .
3. Select **Bookmarks** → **Import bookmarks and settings...**
4. In the pop up box select **Mozilla Firefox**.
5. Check **Favorites/Bookmarks** and press **Import**.
6. After importing bookmarks you can check whether you would like to always show the bookmarks bar.
7. Press **Done**.

Some people choose to login to Chrome using their personal Google account. If you choose to sign into Chrome, you may want to make some changes to your account. Start here: <https://myaccount.google.com/intro/privacy>
